C#, java, JavaScript

Your task is to decode a message sent by a friend of yours to help you cheat on the exam. Be aware that the trainers are watching.

The message arrives as a sequence of numbers separated by a comma.

How to decode it:

- You have to read the input from left to right.
- Convert each number into its binary representation and pad it with zeros to 8 symbols
  - EXAMPLE:
    - let arr = [28, 1, 45, 255];
    - 28 = 00011100
    - 1 = 00000001
    - 45 = 00101101
    - 255 = 11111111
- If the number is on odd position remove all the bits on odd positions and vice versa
  - EXAMPLE:
    - 28 is on even position = 0 0 0 1 1 1 0 0 = 0110
    - 1 is on odd position = 0 0 0 0 0 0 0 1 = 0000
    - 45 is on even position = 0 0 1 0 1 1 0 1 = 0011
    - 255 is on odd position = 1 1 1 1 1 1 1 1 = 1111
- Result is concatenated all the decoded numbers in binary concatenated
  - EXAMPLE:
    - 0110 0000 0011 1111

## Input

message.

- The input data will always be valid and in the [Java May'19 Advanced Practice 4 - 1 day 01:58:21](#)

## Output

- Print to the standard output
- The output consists of one line. On this output line, you must print the **result** after decoding the key.

## Constraints

- The numbers in the array will be in the range [0;255]
- The array length will be between 4 and 400 numbers

## Sample Tests

### Input

```
28,1,45,255
```

[Copy](#)

### Output

```
0110000000111111
```

[Copy](#)

### Input

```
2,1,0,2
```

[Copy](#)

### Output

```
0000000000000001
```

[Copy](#)

## ? Clarifications

No clarifications have been made at this time.
